Marlene Imirzian and Associates Architects

Date: **Wednesday, May 25th**

Time: **6:00pm**

Address: **Paradise Valley Community College
18401 N. 32nd Street
Phoenix, AZ 85032**

It sits on the southwest corner of the PVCC campus.

Designed by Marlene Imirzian & Associates Architects for Paradise Valley Community College, the new 35,000sf, \$12million Life Science Building was completed in August of 2009 and provides new instructional and administrative space that houses the college's Anatomy, Physiology, Biology and Biotechnology Programs. Winner of a 2010 AIA Arizona Design Award, the building is a fusion of unique educational laboratory and specific environmental response, a manifest symbol of the college's commitment to *collaborative learning*, creating an interactive forum for both the formal and informal exchange of ideas within the context of sustainable and responsive desert architecture. The copper and masonry clad structure features a large east facing porch that opens out towards a future campus green and houses innovative, exterior collaboration "pods" as well as a bridge which connects major campus circulation. Sustainable features include playful, oversized downspouts that measure rainfall intensity and are fed from the large water harvesting roof form.
